

Socket Rail Display Setup

Quick setup instructions

Step 1

Remove plastic end-cap from the LDV Aluminum Socket Rail Display by loosening the two phillips screws.

Step 2

Slide the black, 3-piece socket rail clips into the aluminum socket rail display as shown.

Note: make sure the top and bottom flanges are in separate channel slots.

Step 3

Place a socket set on to the display channel and slide the rail clip over the socket set. Position the socket set rail on the display then tighten the socket rail clip with the thumb-screw knob.

Step 4

Slide a second rail clip into position over the socket set rail and then secure the rail clip and socket set by tightening the socket rail clip with the thumbscrew knob. When finished replace the end cap.
